Are gorillas monkeys?

Copilot

No, gorillas are not monkeys. Gorillas belong to a different group of primates known as **apes**. This group also includes humans, chimpanzees, bonobos, orangutans, and gibbons^{1^2^}.

Here are some key differences:

- **Classification:** Gorillas are classified as apes in the family Hominidae, while monkeys belong to various other families within the primate order^{2^}.
- **Physical Traits:** Gorillas are generally larger and heavier than monkeys. They also lack tails, which most monkeys have^{3^}.
- **Behavior:** Gorillas are predominantly ground-dwelling, whereas many monkeys are more arboreal (tree-dwelling)^{4^}.

If you have any more questions about gorillas or other primates, feel free to ask! 🙋
